

Bavis *Transaction Drawer*TM

Customer Service Issues

<i>Commercial capacity</i>	16" x 12 ½" x 5 ¾" interior usable dimensions enables you to transport a \$500 Federal Reserve deposit of quarters. Greater capacity without a larger footprint.
<i>18" stroke</i>	Longest extension available allows your personnel to position the drawer closer to the customer avoiding dropped or damaged items.
<i>25 lbs. capacity</i>	Larger, heavier items are no problem if you choose to send them through the drive-thru.
<i>Full Duplex Audio</i>	Application specific audio provides the quality communication your industry requires for communication with customers. Other systems designed for multiple applications.
<i>Transaction Hold Down</i>	Large hold down bar preventing paper and currency from blowing away.

Operational Considerations

<i>Full seals vs. brushes</i>	Prevents cold air and contaminants from entering the work area. In addition to the seals, there is never an opening allowing outside air to get in during operation.
<i>Electronic brake</i>	Stops the drawer immediately preventing any coasting that occurs without it on both manual and electronic products resulting in damage to your customers' vehicles.
<i>Construction</i>	Only four moving parts with a total of 42 parts compared to other drawers with four times the number of parts.
<i>Safety Bar</i>	Positioned around the inside door opening, provides additional protection for operator by stopping door operation if ever required.
